

With the increase in industrial risks, the harmfulness of modern fires and the professionalism of users, MATISEC designs and manufactures Insulated Breathing Apparatus combining robustness, ergonomics and new technology. Recognised by many fire brigades, the Navy...

CLICK regulator

The regulator is available in two versions: click-on or first breath. The mini-regulator ensures an overpressure in the mask and a breathing comfort without equivalent to this day thanks to its pneumatic control technology. The mini-regulator is equipped with a red button that can be operated by hand to allow the wearer to give himself an extra supply of air, if the need arises (heat, shortness of breath, etc.).

The CLICK regulator is designed to comply with the NF EN 137 standard.

It must be used with a MATISEC TOTAL 3 mask.

GPAL-INCURVE

The GPAL-INCURVE is a compact and robust device with a quick and tool-free air line removal system. It complies with the European standard EN137-2.

GPAL-QS

The GPAL-QS is a self-contained breathing apparatus with all the technological advances in breathing quality.
