

With the increase in industrial risks, the harmfulness of modern fires and the professionalism of users, MATISEC designs and manufactures Insulated Breathing Apparatus combining robustness, ergonomics and new technology. Recognised by many fire brigades, the Navy...

Rescue MAT AIR

Like the MAT AIR, the MAT AIR RESCUE is a compressed air supplied breathing apparatus with a full face mask equipped with a self-contained emergency device in case of failure of the main MP network or AIR source.

The rescue device can be of variable capacity from 1 to 3 litres and fitted to a backpack or waistcoat.

In all cases, it must not hinder the wearer's use of the network.
