

Matisec designs, develops, produces and markets chemical intervention suits, guaranteeing complete, reliable and safe protection. Meeting the EN 943-2 standard, they allow various rescue operations in dangerous environments, in corrosive chemical, liquid or gaseous media.

ALL MATISEC CHEMICAL PROTECTION SUITS

▶ GR IV

The GR IV suit is a non-ventilated type 1B (gas-tight according to EN 943-2) reusable protective suit against liquid and gaseous chemicals (liquid aerosols and solid particles) when wearing SCBA outdoors.

▶ GR IV SOL

The GR 3 SOL suit has the same characteristics as the GR 3 suit but allows the SCBA inside to be protected. It is a reusable protective suit against liquid and gaseous chemicals (liquid aerosols and solid particles).

▶ DM II

The DM II suit consists of an envelope allowing the use of SCBA inside with its mask (type 1a). Its panoramic anti-fog screen offers a very wide field of vision upwards and downwards.

▶ **ULM II**

The ULM II suit uses different assembly and construction technologies than elastomeric suits. It is composed of multi-layer films ensuring compliance with the EN 943 type 1A standard while guaranteeing flexibility and lightness.

▶ **ERGOLIER**

The Ergolier suit has been designed to meet the requirements of handling highly volatile products, such as rocket and satellite fuels. (Ergol, Hydrazine...)
